

ABOUT ME

My name is Vaskrsije Panic and I was born in 1998 in Banja Luka. I have lived in Teslic, the Republic of Srpska. I am currently living in Belgrade and I am a computer programmer.

I graduated from the Secondary School of Electrical Engineering in Teslic, after which I was planning to enroll in a University. However, the plans changed so I started attending ITAcademy in Belgrade, the Department of PHP Development. I see myself as a junior software developer at the moment.

The first time I encountered programming was 9 years ago, when, while gaming, I tried to build a forum where gamers would meet and chat. Later I heard about SMF (Simple Machines Forum) which offers a lot of interesting features. That is when I got interested in how their default theme works and began learning about PHP and HTML/CSS. I studied step by step, by trial and error, while building my own custom themes.

I have watched multiple tutorials as well, and learned a lot, so soon afterwards I started paid work for some gaming community forums, where I built five custom themes.

In my free time, I like spending time in nature, doing sports, especially skiing. I also enjoy socializing with friends and family.

If you have any further questions, feel free to contact me.

1.05.2019 – 1.07.2019

TASKS:

- Version control of code through Git technology
- Work and communication within a team
- Work with MVC architecture of the application
- Work with libraries for the graphic display of data

MY PROJECTS

Sporthouse (2017)

This e-commerce project is developed using PHP, CSS, Bootstrap and JavaScript. Git is used as a version control system, MySQL is used for data storage. Project has a user side where he/she can view product category and add products to cart and proceed for checkout whereas from administration side he/she can view sales, number of product, users, daily sales report, add product and categories. The user can also leave comments on each product if he/she wants. In this project, all the main functions are performed from the Admin side.

Technology used:

- PHP
- HTML
- CSS
- JAVASCRIPT
- MYSQL
- JQUERY

Live CHAT (2017)

Chat application which can handle multiple users at the same time. It also supports file transfer. It is entirely based on PHP and consists of two parts: HTML/CSS/JS (client application) and Server (php application). To start chatting, users will have to first register with this new system and check their email which has been used during registration process. Chat screen will open which will display the user name and its image. It will also maintain the chatting history data and conversation data between two users along with date and time. When the user will click on Logout button, it will destroy their session which has been set by the server side and making all their property to null, by which their account will not be hacked.

Technology used:

- PHP
- CSS

- JAVASCRIPT
- HTML
- MYSQL

Traveling (2019)

Template that working as traveling. I did it in html, css and jquery. This template is available for desktops, mobile phones, and tablets. On this template I've all worked without any frameworks.

Technology used:

- HTML
- CSS
- JQUERY
- PHOTOSHOP
